Description			
The /etc/opkg.conf file in the compiled images contains wrong URLs. For instance:			
<pre>dest root / dest ram /tmp lists_dir ext /var/opkg-lists option overlay_root /overlay src/gz chaos_calmer_base http://downloads.openwrt.org/snapshots/trunk/ar71xx/packages/base src/gz chaos_calmer_b6m_packages http://downloads.openwrt.org/snapshots/trunk/ar71xx/packages/b6m_ packages src/gz chaos_calmer_libremap_agent http://downloads.openwrt.org/snapshots/trunk/ar71xx/packages/li bremap_agent src/gz chaos_calmer_luci http://downloads.openwrt.org/snapshots/trunk/ar71xx/packages/luci src/gz chaos_calmer_nc http://downloads.openwrt.org/snapshots/trunk/ar71xx/packages/nc src/gz chaos_calmer_openwrt_routing http://downloads.openwrt.org/snapshots/trunk/ar71xx/packages/o penwrt_routing src/gz chaos_calmer_packages http://downloads.openwrt.org/snapshots/trunk/ar71xx/packages/packages src/gz chaos_calmer_qmp_packages http://downloads.openwrt.org/snapshots/trunk/ar71xx/packages/qmp_ packages</pre>			
Some of the URLs are right (the ones coming from the OpenWrt "official" feeds like base, luci, routing, etc.) but the ones corresponding to qMp packages (e.g. qmp, libremap) are wrong, since the packages will not be hosted there.			
The default URL should be set to something like http://fw.qmp.cat/version_openwrt-arch-generic/packages
