Description

I'm having trouble upgrading an Alix x86 board with qMp 3.0.2 to qMp 3.1. See the log:

root@qMp-4e74:~# qmpcontrol upgrade
executing function upgrade...
qMp: Found new system image at http://fw.qmp.cat/testing/Alix-qMp_testing-sysupgrade-20141127_2113.bin
qMp: Downloading image http://fw.qmp.cat/testing/Alix-qMp_testing-sysupgrade-20141127_2113.bin
qMp: Checksum correct!
tar: removing leading '/' from member names
Do you want to upgrade system using image http://fw.qmp.cat/testing/Alix-qMp_testing-sysupgrade-20141127_2113.bin? [N,y] y

root@qMp-4e74:~# sleep syslogd klogd hotplug2 ubusd netifd
Sending KILL to remaining processes ... uhttpd
Switching to ramdisk...
Performing system upgrade...
2624+1 records in
2624+1 records out
Refreshing partitions
mount: mounting /dev/sda1 on /mnt failed: Invali[511.123611] Restarting system.
[511.127342] machine restart
PC Engines ALIX.2 v0.99h
640 KB Base Memory

Configuration files are not saved from one version to the other. I guess it must have something to do with the mount fail line.

History

#1 - 12/01/2014 05:40 PM - Roger Pueyo Centelles

- Status changed from Nou to Tancat

- % Done changed from 0 to 100

The same happens when upgrading from plain OpenWrt 12.09 to 14.07:

root@OpenWrt:/tmp# sysupgrade -c -v openwrt-x86-alix2-combined-squashfs.img
Saving config files...
etc/ethers
