Description			
Hi,			
I'm trying to port forward (Firewall -> Port Forwarding) in qmp but it seems not to be working. I fixed it in the past via xinetd [1], but since I am hitting an issue installing packages in Macondo 4.0, I can't make it work.			
Does the port forward in qmp firewall (web interface) work?			
I paste the relevant section of my /etc/config/firewall			
<pre>config redirect option target 'DNAT' option src 'wan' option dest 'lan' option proto 'tcp udp' option src_dport '8080' option dest_ip '10.38.32.34' option dest_port '80' option name 'test'</pre>
